PROFESSIONAL SUMMARY

Java backend engineer with 6 years of experience designing and building REST APIs and cloud-native microservices with Spring Boot on AWS. Experience with event-driven design using Kafka, SQS, and SNS, automated testing with JUnit and Mockito, and production observability with Datadog. Uses GitHub Copilot and Claude-based IDE agents to improve delivery speed and software quality and works in Agile teams with cross-functional stakeholders.

TECHNICAL SKILLS

Languages: Java, Python, JavaScript, SQL

Backend & Frameworks: Core Java, Spring Boot, Spring MVC, Spring Framework, Hibernate, REST APIs, OAuth 2.0, Resilience4j

Cloud, Messaging & Containers: AWS (S3, SQS, SNS, Lambda, ECS), Apache Kafka, Docker, Kubernetes, Helm

Databases: PostgreSQL, Oracle, MySQL, MongoDB, Liquibase

Testing & Automation: JUnit, Mockito, Jenkins, Maven, Git, CI/CD pipelines

Observability & Reliability: Datadog (logs, APM metrics, dashboards, alerts), SLOs, on-call

Architecture & Practices: Distributed microservices, event-driven architecture, API versioning, Agile/Scrum, JIRA, Confluence

AI-Assisted Development: GitHub Copilot, Claude-based IDE agents

PROFESSIONAL EXPERIENCE

Fidelity Investments | Merrimack, NH

Dec 2023 – Present

Software Engineer

- Design and develop REST APIs and cloud-native Java and Spring Boot microservices on AWS for Fidelity's digital asset platform, working with cross-functional teams in Agile sprints to define requirements and deliver features.
- Built event-driven services using Kafka, SQS, and SNS; developed Java Kafka consumers that process JSON messages and store files in AWS S3, improving data handling efficiency by 40%.
- Investigated production crashes and strengthened Spring Boot service resiliency by tuning Resilience4j retry, timeout, and circuit-breaker settings for downstream API failures, guided by production error and latency metrics.
- Provide on-call support, using Datadog logs, APM metrics, dashboards, and alerts to monitor service health, troubleshoot production issues, and identify reliability and performance bottlenecks; reduced downtime by 20%.
- Applied SLO-driven reliability practices to RESTful services, defining availability, latency, and error-rate objectives, and using SLO trends to prioritize reliability and performance work.
- Implemented API versioning and backward-compatibility practices for RESTful services using versioned endpoints, contract-aware changes, and deprecation strategies, so downstream consumers are not broken.
- Build and deploy services on AWS (S3, SQS, SNS) using Docker, Kubernetes, and Helm charts.
- Contributed to a large-scale Oracle to PostgreSQL migration, converting tables, queries, and stored procedures, and managed schema changes (DDL/DML) with Liquibase.
- Write automated unit and integration tests with JUnit and Mockito as part of the CI/CD pipeline; participate in code reviews and releases; author technical documentation in Confluence.
- Use GitHub Copilot and IDE-integrated AI agents, including Claude-based agents, for implementation, refactoring, debugging, and test generation, to improve delivery velocity and code quality while validating output against requirements.

Mphasis | India

Jun 2018 – Dec 2021

Software Engineer

- Served as designated Subject Matter Expert for GENIUS, a proprietary shipment tracking application used by FedEx.
- Designed, developed, and deployed microservices using Core Java, J2EE, Spring, Spring Boot, Hibernate, SOAP/REST APIs, and AWS, reducing system response time by 30% and increasing shipments processed per hour by 40%.
- Implemented a CI/CD pipeline with Jenkins, Maven, and Git, cutting code deployment time by 50%.
- Designed database schemas in MySQL and MongoDB, improving application performance by 25%.

EDUCATION

Master of Science in Computer Science, University of North Texas, Denton, TX

Jan 2022 – May 2023

Bachelor of Technology in Computer Science, MallaReddy College of Engineering and Technology, India

Aug 2014 – May 2018
